Keep up with course
Check Moodle for assignments
Start early so you can review your work before it is due
Read instructor feedback and keep track of your progress
Check work before and after grading and discuss with other students

Complete assigned readings
Use readings to fill gaps in plenary lecture notes and lab worksheets
Correct your notes and work using based on readings
Learn how to tell the difference between important and unimportant topics in readings

Exam preparation
Correct misunderstandings about material. It is difficult to unlearn wrong things.
Complete draft answers to study guide after comparing notes to powerpoints and readings. Then compare your answers to other students and improve them
Read test questions carefully and answer what’s asked
Compare your answers to the key and think of how you could have answered them better.

Success in Science 120!
