Instructor: Dr. Shirley Yap 
Office: SF 556 
Email: shirley.yap@csueastbay.edu 
Phone: 510-885-4991 

Office Hours: 2:00 PM - 3:50 PM Tuesdays and Thursdays (or by appointment on Fridays) 

Text: *Calculus, Early Transcendentals Vol 8* by Stewart 

Calculator: TI-83 or equivalent. 

Course Web Site: Look on blackboard:  http://bb.csueastbay.edu 
This site will have course handouts available for downloading. It will be updated with other information as the semester progresses. 

Expectations:  
- I expect every person in this class to treat every other person in this class with respect. 
- I expect every person in this class to read each section in the book before or after the lecture for that section. 
- I expect every person in this class to attempt the daily WebAssign homework before the following class period. 
- I expect the team homework to be completed in the manner described in the handout. 
- I expect each person in this class to check their e-mail regularly. 

Focus of Course: This course focuses on cooperative learning, with an emphasis on written and verbal explanations. Students will learn to understand and explain mathematical problems geometrically, numerically, symbolically, and verbally. 

Grading Policy: We will have 2 Midterm exams, 1 final exam, 1 Gateway, WebAssign homeworks, and Team Homeworks. The break-down is as follows: 

- First Midterm 15 % 
- Second Midterm 15 % 
- Final Exam 30 % 
- Gateway n/a 
- WebAssign Homeworks 20 % 
- Team Homeworks 20 %
Definition of WebAssign Homeworks: After every class period where new material is covered, you will find a new homework available on WebAssign. This will be due usually 1 week later. You should attempt to do these problems and bring any questions that you may have to the following class period. You will have two submission chances per problem part to receive full credit for that part. If you submit an incorrect answer, you have a third chance to submit a correct answer for half credit.

Gateway: Being able to differentiate is a fundamental requirement of this course. The Gateway exam allows me to ensure that anyone passing my class can differentiate basic functions, while also giving me the freedom to test applications of the derivative on the midterm exams.

Each gateway exam has 10 differentiation problems. A passing grade on the Gateway is a 8/10 or better score. You will have one chance to take the gateway in class. If you pass the gateway in class, you will receive an extra 5 points on your final exam score. If you do not pass the gateway in class, you may take it with me during office hours or on Friday the last week of classes. I will also attach an “absolutely last chance” gateway to your final exam, which you may take if you haven’t passed the gateway by the end of classes. If you do not pass the gateway, your grade will be lowered a full letter. There will be practice gateway exams available on blackboard, and practice problems on WebAssign.

Late Work Policy: Team Homework will be turned in at the beginning of class on the day that it is due. I will not accept late Team Homework, and I will not accept late WebAssign homework. As the homework is group homework, if one person in a group must be gone the day it is due, another student can hand it in.

If for some reason you are unable to attend an exam, I expect to be notified by email or phone call as soon as possible (email is optimal) so that we can schedule a makeup. If I am not contacted within 24 hours of a missed exam, it cannot be made up.

SCAA: Free tutoring from the Student Center for Academic Achievement.
